What are the key risks that are specific to the securities?

Most material risk factors specific to the securities

There are also risks associated with the Certificates, including:

1. Risk relating to the structure of the Certificates:

Leverage Products: Investors may be exposed to a partial or total loss of their investment. The return on the Securities depends on the performance of the Underlying Reference(s) and the application of automatic early redemption features. Additionally, the return may depend on other market factors such as interest rates, the implied volatility of the Underlying Reference(s) and the time remaining until redemption. The effect of leverage on the Securities may be either positive or negative. Open End Certificates and OET Certificates do not have any pre-determined maturity and may be redeemed on any date determined by the relevant Issuer and investment in such Open End Certificates and OET Certificates entails additional risks compared with other Certificates due to the fact that the redemption date cannot be determined by the investor.

2. Risk relating to the Underlying and its Disruption and Adjustments:

Index Securities are linked to the performance of an underlying index (an "Index"), which may reference various asset classes such as, equities, bonds, currency exchange rates or property price data, or could reference a mixture of asset classes. Investors in Index Securities face the risk of a broader set of circumstances that mean that the assets underlying the Index do not perform as expected compared to an investment in conventional debt securities. Accordingly, the return on an investment in Index Securities is more likely to be adversely affected than an investment in conventional debt securities: exposure to one or more index, adjustment events and market disruption or failure to open of an exchange which may have an adverse effect on the value and liquidity of the Securities and that the Issuer will not provide post-issuance information in relation to the Underlying Reference.

3. Risks related to the trading markets of the Certificates:

Factors affecting the value and trading price of Securities: The trading price of the Securities may be affected by a number of factors including, but not limited to, the relevant price, value or level of the Underlying Reference(s), the time remaining until the scheduled redemption date of the Securities, the actual or implied volatility associated with the Underlying Reference(s) and the correlation risk of the relevant Underlying Reference(s). The possibility that the value and trading price of the

Securities will fluctuate (either positively or negatively) depends on a number of factors, which investors should consider carefully before purchasing or selling Securities.

4. Legal risk:

Meeting of Holders: The terms of the Securities will contain provisions for calling meetings of holders of such Securities to consider matters affecting their interests generally. These provisions permit defined majorities to bind all holders, including holders who did not attend and vote at the relevant meeting and holders who voted in a manner contrary to the majority.

Omfattas värdepapperen av en garanti?

Garantins art och omfattning

Åtagandena enligt garantin är äldre preferensobligationer (enligt betydelse i artikel L.613-30-3-1-3° i den franska lagen Code monétaire et financier) och icke säkerställda åtaganden för BNPP och kommer att rankas *pari passu* med alla övriga nuvarande och framtida äldre preferensobligationer och icke säkerställda åtaganden som är föremål för sådana undantag och kan vid olika tillfällen vara obligatoriska enligt fransk lag. I händelse av en skuldnedskrivning av BNPP men inte av BNPP B.V., kommer alla förpliktelser och/eller belopp som är i BNPP:s ägo enligt borgensförbindelsen reduceras för att återspegla alla ändringar som tillämpas för skulder tillhöriga BNPP, vilket leder till en tillämpning av skuldnedskrivning för BNPP av en tillämplig regleringsmyndighet (inklusive i en situation där själva borgensförbindelsen inte är föremål för en sådan skuldnedskrivning).

Garantigivaren garanterar ovillkorligt och oåterkalleligt varje innehavare att, om BNPP B.V. av någon anledning inte betalar en summa som ska betalas eller inte lever upp till någon annan skyldighet i samband med ett värdepapper på det angivna datumet för en sådan betalning eller avkastning, kommer garantigivaren enligt villkoren att betala den summan i den valuta i vilken en sådan betalning ska betalas med omedelbart tillgängliga medel eller, alltefter omständigheterna, utföra eller tillse att relevant skyldighet uppfylls på förfalldagen för sådant resultat.

Vilka nyckelrisker är specifika för värdepapperen?

Mest väsentliga riskfaktorer som är specifika för värdepapperen

Det finns även risker som är förknippade med Certifikat, inklusive:

1. Risk som är relaterad till värdepappernas struktur:

Hävstångsprodukter: Investerare kan exponeras mot en partiell eller fullständig förlust av sin investering. Avkastningen på värdepapper beror på avkastningen på den eller de underliggande referenserna och på tillämpning av egenskaper för automatisk tidig inlösen. Dessutom kan avkastningen bero på marknadsfaktorer som till exempel räntor, indirekt volatilitet på den eller de underliggande referenserna och den tid som återstår till inlösen. Effekten av en hävstång på värdepapperen kan vara antingen positiv eller negativ.

Open End-certifikat och OET-certifikat har inte någon i förväg fastställd löptid och kan alltid lösas av berörd Emittent. En investering i sådana Open End-certifikat och OET-certifikat medför ytterligare risker jämfört med andra certifikat på grund av att inlösendatumet inte kan fastställas av investeraren;

2. Isk som är relaterad till de Underliggande och dess Avbrott och Justeringar:

Indexvärdepapper är kopplade till utvecklingen på ett underliggande index (ett Index), som kan referera till olika tillgångsklasser som t.ex. aktier, obligationer, utländsk valuta eller värde på fastigheter eller kan referera till en blandning av tillgångsklasser. Investerare i Indexvärdepapper står inför risker som har ett bredare spektrum vilket betyder att tillgångarna som Indexet baserar sig på inte fungerar på samma sätt som en investering i en konventionell obligation. Avkastningen på en investering i Indexvärdepapper påverkas antagligen mer negativt än en investering i en konventionell obligation.

3. Risk som är relaterad till handel med värdepapper:

Faktorer som påverkar värdet och kursen på Värdepapper: Kursen på Värdepapper kan påverkas av ett antal faktorer inklusive men inte begränsat till det gällande priset eller nivån på Underliggande Referenser, återstående tid på Värdepapperets planerade inlösendag, aktuell eller implicit volatilitet som är förknippat med den Underliggande Referenten och risken med det inbördes förhållandet till gällande Underliggande Referens(er). Risken att värdet och kursen på Värdepapperet kan fluktueras (antingen uppåt eller neråt) beror på ett antal faktorer som investeraren nogga borde överväga innan köp eller försäljning.

4. Rättsrisker:

Möten - Villkoren för Skuldebrevet kommer innehålla bestämmelser för hur man ska kalla till möten mellan innehavare av aktuella Värdepapper för att belysa frågor som generellt sett påverkar deras intressen. Dessa bestämmelser ger angivna majoriteter rätt att fatta beslut som binder alla innehavare, inklusive innehavare som inte har närvarat eller röstat på aktuellt möte och även innehavare som röstat mot majoriteten.
